Water Softener

It is high-efficiency chelating dispersant. It has extraordinary chelating ability, finishing the hard water softening treatment instantly. It can rapidly chelate the calcium, magnesium and iron ion in water. It is necessary in linen washing, garment washing and textile washing process. It can improve the water quality and achieve better washing effect.

Property

Appearance: White small granular Powder

Main ingredients: Multiple surfactants

Solubility: Cool water soluble

Stability: Resist acid, alkali and electrolyte

PH Value: 9.5 (1% Solution)

Content: >85%

Washing Temperature: 5°C ~ 80°C

Function

Soft water can be used as the scale inhibitor for washing equipment. It can chelate metal ion in dirt. It has emulsify effect on stains, effectively removing stains. Suggest dosage is 0.5-1.0%, adjust dosage according to the water quality.

Application

Washing for hotel linen, table cloth, hospital uniform, seat fabric, etc.

Feature

1. Suitable for all kind of water quality.
2. Prevent stains from redeposition.

Package&Storage

1. 25kg /woven bag.
2. Waterproof, damp proof, cool and dry place. Do not touch with skin and eyes, keep away from kids. Do not store in a wet environment.
